Techstack: (EDA), (drill-down), (next steps process flow) Jan 2024 – Dec 2025 data

Why did revenue growth slow in Q4 2025?

Business problem

Tripla's revenue growth slowed sharply in Q4 2025: from +36.7% year on year in Q3 to +8.2% in Q4. Revenue is down 21.9% from Q3 (vs a normal Q4 dip of −1.3% in 2024). This report identifies where the slowdown came from and what to do about it.

Diagnostic Findings

How much did revenue growth slow in Q4, and what slowed with it?

If the slowdown came from fewer bookings, bookings should fall.
If it came from lower room rates, ADR should fall.
If it came from more cancellations, the cancellation rate should rise.

Year-on-year growth, all markets, Q3 vs Q4 2025

	Q3-2025	Q4-2025	Change (pts)
Net revenue	36.7%	8.2%	▼ *28.5 pt*
Gross bookings	31.8%	4.8%	▼ *27.0 pt*
Net bookings	30.8%	2.0%	▼ *28.8 pt*
ADR	4.8%	4.9%	▲ *0.1 pt*
Cancellation rate*	9.7%	11.9%	▲ *2.2 pt*

YoY = vs. same quarter last year. *Cancellation rate shows the actual rate, not % change.

but Revenue growth fell 28.5 points, matched almost exactly by bookings, while ADR held steady and cancellation changed only 2.2points, signaling a booking volume problem.

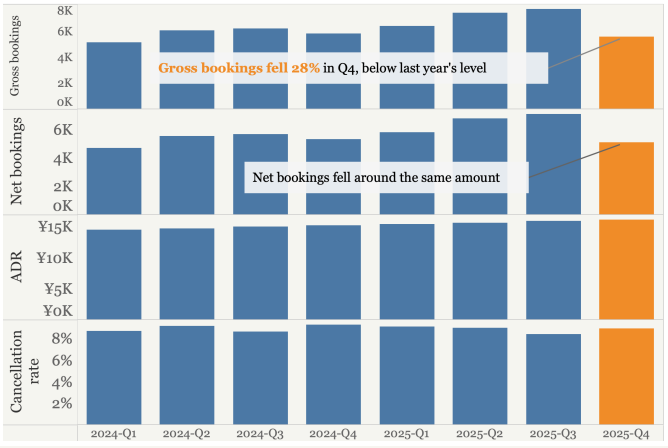

Which market drove the Q4 slowdown?

If one market drove the slowdown, then its revenue should break from the normal Q4 pattern while others stay on trend.

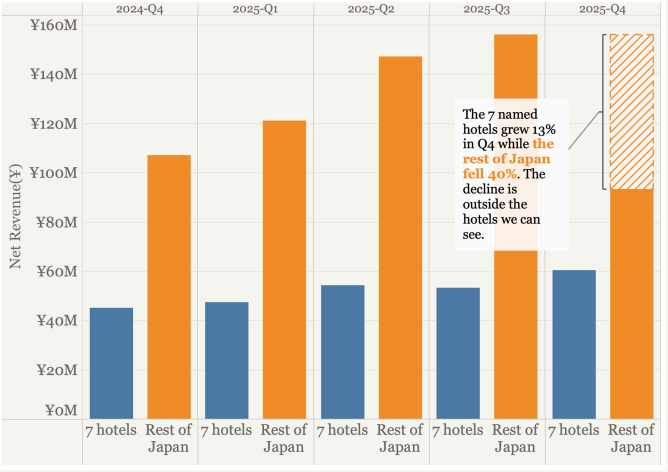

What weakened inside Japan?

If Japan's slowdown came from fewer bookings, then gross bookings should fall while ADR and cancellations stay the same.

Is Japan's decline spread across its hotels, or concentrated?

If the slowdown were broad, the 7 named hotels' revenue should have also fallen.

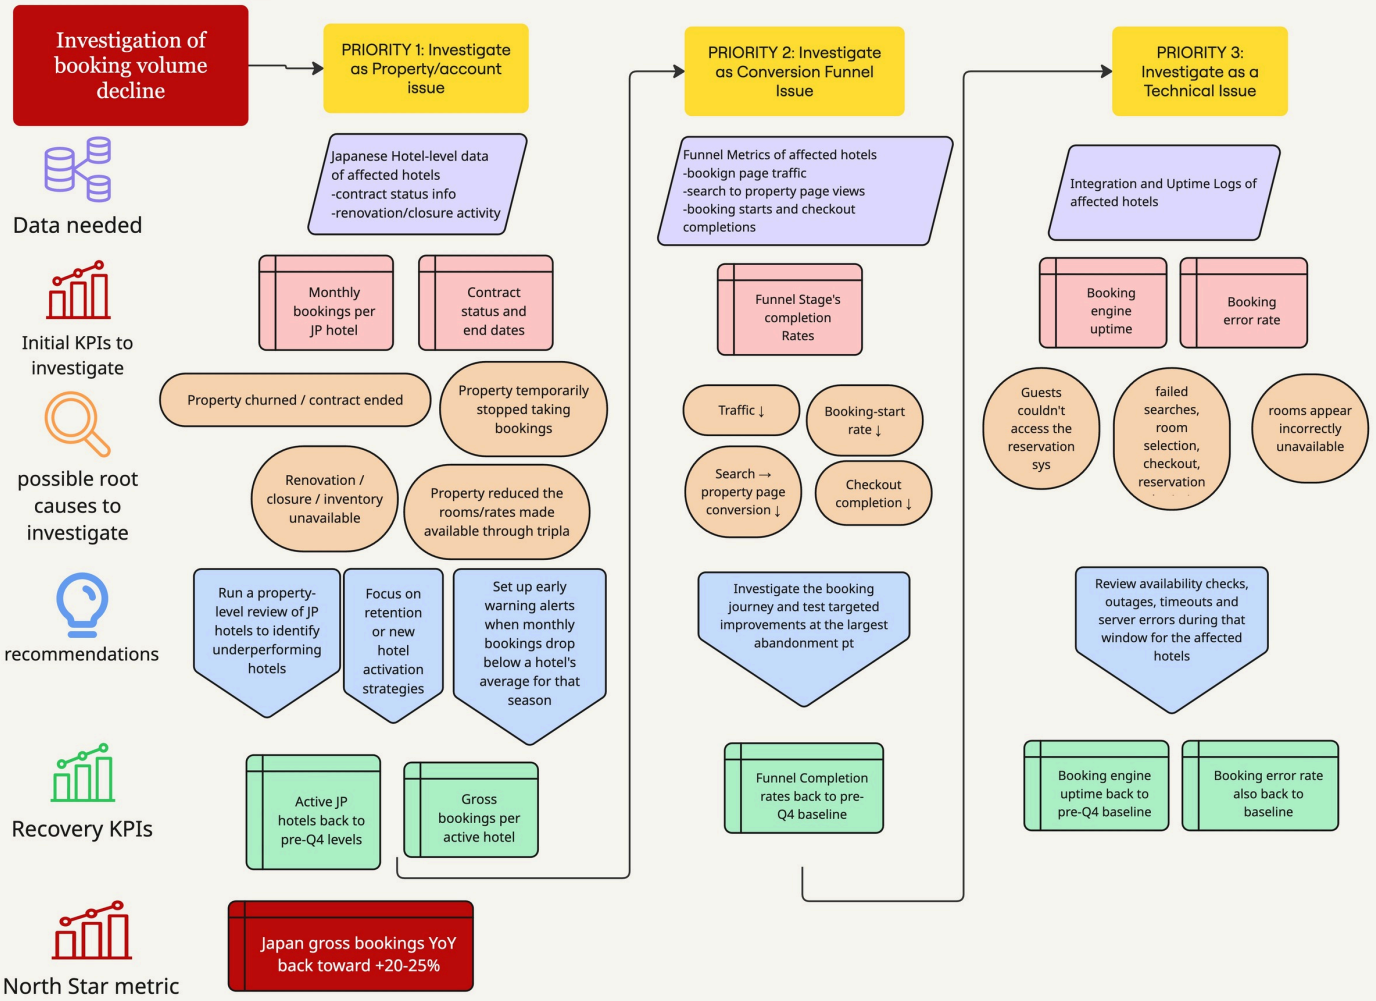

Driver tree

Q4 revenue growth slowed (36.7% → 8.2% YoY)

- **Market:** Japan (biggest drop in yen and growth rate) ¥55.8M of the ¥60.3M
  - **Metric:** gross bookings fell 28% vs Q3,but cancellations, ADR and length of stay stable
    - **Channel:** all fell together; no channel-specific cause
      - **Hotels:** decline concentrated in the other Japanese hotels that were not included in the data (−40% drop)
        - **Likely cause (to confirm):** Booking volume decrease can be due to a property/account issue, conversion funnel issue, Technical issue (couldn't tell from provided data alone)

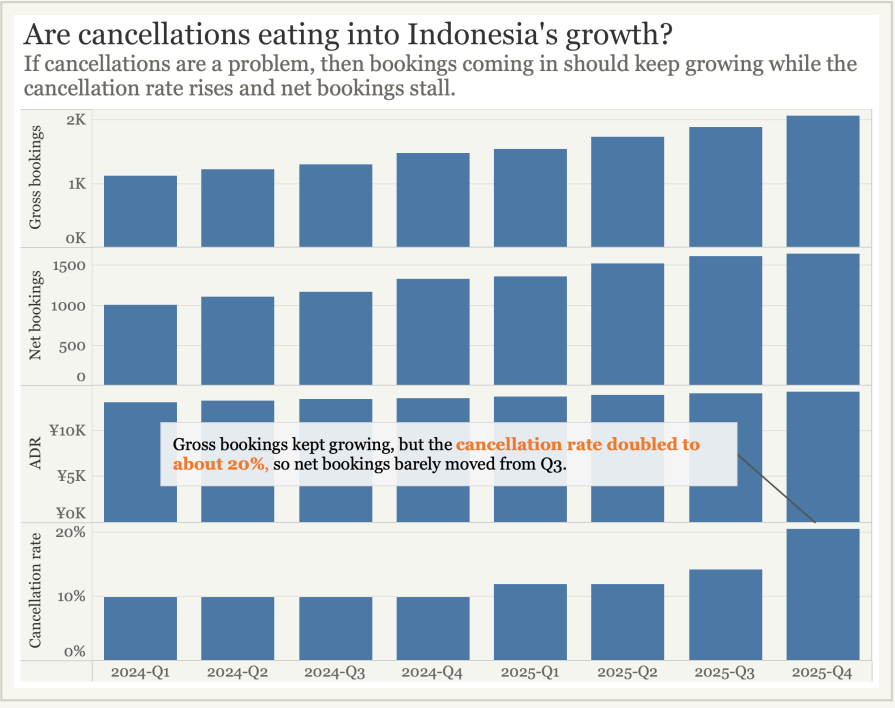

Next steps

Supporting investigation

Watch: Indonesia. Investigate why cancellations doubled to about 20%. Drill down on hotel, channel and lead time. It didn't cause Q4 slowdown but it's getting worse.

Recovery KPI: cancellation rate back to about 12% or below

Limitations

- The data is aggregated, with no property counts, account status or booking-level records, so we can locate the decline but not yet diagnose its cause.
- Hotel-level data covers only 7 Japanese properties (about 25% of Japan revenue)
- Hotel data starts in 2024-Q4, and hotel ADR is re-calculated (1.9 nights per booking assumption was not used).
- Channel data isn't split by market.
